CERTIFICATE OF QUALITY
AND CONFORMITY

QDTM with thickener < 1% Sodium Chloride

02/17/23

To whom it may concern,

Be it known that all products manufactured by Radiation Decontamination Solutions, LLC are made in the United States of America according to its proprietary manufacturing specifications under strict quality controls. They conform to advertised claims and warranties. They are as advertised.

Furthermore, our Quick Decon TM (with thickener) has Methyl Cellulose added to thicken the liquid so it adheres longer to vertical walls. The thickener is Methyl Cellulose, 4000CPS. We add 19 grams/gallon of TM. This gives a consistent syrupy quality to enhance contact time on vertical surfaces. This product is water soluble and must be removed with COLD water rinses. **DO NOT LET DRY ON THE SURFACE!** It will form a paper-like film that will be very difficult to remove.

Sincerely,

Bruno J. Schmidt, Pres.
Radiation Decontamination Solutions, LLC
